VERSIONE AUTOPORTANTE / SELF-SUPPORTING VERSION

VERSIONE FISSAGGIO LATO LARGHEZZA / VERSION MOUNTED ON THE WIDTH SIDE

VERSIONE FISSAGGIO LATO PROFONDITÀ / VERSION MOUNTED ON THE DEPTH SIDE

LEGENDA / LEGEND

Punto di vista

La figura, posizionata sempre frontalmente alle lame, indica il punto di vista, è utile per compilare il modulo d'ordine e per scegliere l'orientamento desiderato di apertura delle lame.

Adduzione elettrica

In fase di compilazione ordine specificare dove sarà posizionata.

Il montante predisposto per l'adduzione elettrica è sconsigliato per il deflusso dell'acqua.

Deflusso acqua

In fase d'ordine specificare su quali montanti predisporre lo scarico d'acqua. Su una configurazione a 1 modulo, devono essere previsti almeno 2 deflussi d'acqua.

Attenzione: è necessario posizionare gli scarichi uno a destra e uno a sinistra rispetto alla vista frontale della struttura. Per ogni modulo aggiuntivo è necessario aggiungere almeno 1 ulteriore deflusso d'acqua.

Point of view

The figure, always positioned in the front of the blades, indicates the point of view, it is useful to fill in the order form and to choose the desired orientation of the blades when opening.

Power supply

When filling the order, please specify where it will be placed. The post prepared for the power supply is not recommended for water discharge.

Water discharge

During the order phase, please specify on which posts you would like to prepare the water drainage. On a 1-module configuration, at least 2 water discharges must be provided. Warning: it is necessary to place one drainage on the right and the other on the left with respect to the front view of the structure. For each additional module it is necessary to add at least 1 additional water discharge.

Caratteristiche generali

- Pergola con tenda scorrevole a telo teso scarico su entrambi i lati
- Impacchettamento del telo posteriore (standard), o anteriore su richiesta
- Brevetto gronda basculante: la gronda basculante di Nomo e Rialto è un brevetto concesso Pratic ed evita l'eventuale vaporizzazione di acqua all'interno della struttura
- Moduli accoppiabili
- Struttura con gronde e scarico acqua nei montanti
- Gronda basculante di serie
- Struttura realizzata con profili in alluminio estruso, lega primaria UNI6060 e UNI6063
- Carter in poliammide personalizzato
- Cuscinetti radiali a sfere con doppia gabbia di protezione
- Pulegge realizzate in nylon 6.6 caricate vetro
- Cinghia di trasmissione in poliuretano con trefoli in acciaio
- Carrelli in poliammide con perni in acciaio INOX e rullini in Delrin autolubrificante
- Tessuti antimacchia e sottoposti a trattamenti per garantire la durata dei colori nel tempo, preservandoli dall'azione dei raggi U.V., dall'acqua e dai microrganismi.
- Resistenza al vento fino a grado 10 della scala Beaufort
- Motore Safety Box

INDICAZIONI IMPORTANTI

- Su ogni modulo dovranno essere previsti almeno due montanti per lo scarico dell'acqua (attenzione, è necessario posizionare gli scarichi uno a destra e uno a sinistra rispetto alla vista frontale della struttura)
- Il processo meccanico di calandratura può provocare delle inevitabili deformazioni ai profili che tuttavia non compromettono né la stabilità della struttura né il funzionamento del meccanismo Tecnic. Pertanto non potranno essere oggetto di contestazione
- Il montaggio dev'essere fatto a regola d'arte garantendo che la struttura portante superiore sia perfettamente in piano per permettere il corretto deflusso dell'acqua
- Per l'installazione è consigliato l'utilizzo di un sollevatore (Ercolino p. 164)
- Si raccomanda di controllare periodicamente che gli scarichi delle gronde non siano ostruiti
- In fase di impacchettamento potrebbero presentarsi alcune pieghe naturali nel telo causate dalla curvatura dei profili rompitratta. Questi fenomeni non potranno essere oggetto di contestazione in quanto non evitabili e non pregiudicanti il corretto funzionamento della pergola
- In caso di Nomo e Rialto abbinate a Slide o Slide Glass: le chiusure scorrevoli vetrate, anche se impacchettate, offrono una superficie maggiore alla spinta del vento. I luoghi di posa necessitano pertanto di una particolare attenzione alla resistenza al vento.

SERVIZI

- Per agevolare l'installazione in piano è possibile richiedere il taglio dei montanti a misura
- La struttura viene fornita in macro assiemi funzionali comprensivi di:
- impianto elettrico e cablaggi
- impianto di deflusso dell'acqua
- Telo preassemblato

General features

- Pergola with retractable taut-cover, no slope and with water discharge on both sides
- Rear retractable awning (standard) or front retractable awning (on demand)
- Tilting gutter patent: Nomo and Rialto tilting gutter is a Pratic patent and it avoids the vaporization of water within the structure
- Coupling modules
- Structure with gutters and water drain in the uprights
- Standard tilting gutter
- Structure made of extruded aluminum profiles, primary alloy UNI6060 and UNI6063
- Customized polyamide carter
- Deep groove ball bearings with double protection cage
- Pulleys made of nylon 6.6 glass reinforced
- Transmission belt in polyurethane with steel stands
- Trolleys in polyamide with stainless steel pins and Delrin self-lubricating rolls
- Fabrics: stain-proof fabrics submitted to treatments to ensure durability of colours over time, preserving them from the action of UV rays, water and microorganisms
- Wind resistance up to 10 Beaufort Wind Force Scale
- Safety Box motor

HIGHLIGHTS

- Every single module must be provided with at least two posts for water drainage (please note that it is necessary to place the discharge points one on the right and one on the left according to the front view of the structure)
- The mechanical curving process may cause inevitable deformations to the profiles. However, this does not compromise either the stability of the structure or the operation of the Tecninc mechanism. Consequently, they are not in dispute
- The installation must be done in a workmanlike manner ensuring that the upper support structure is perfectly level to allow proper water drainage.
- For the installation we recommend using a lift (Ercolino p. 164)
- We recommend to periodically check that the gutter drains are not blocked
- Nomo and Rialto cover, when retracting, may present some natural creases due to the curvature of the ribs. These phenomena cannot be subjected to dispute since they cannot be avoided and they do not influence the proper functioning of the structure
- In case of Nomo and Rialto combined with Slide or Slide Glass: the sliding glass closures, even if packaged, offer a greater surface to wind pressure. Therefore, the installation sites require a particular attention to wind resistance.

SERVICES

- To ease the flat installation you may require the custom cut of the posts
- The structure is supplied in functional macro-assemblies consisting of:
- electrical system and wiring
- water discharge system
- Pre-assembled cover

Configurazioni fuori standard / Out of standard configurations

Per l'effettiva fattibilità della struttura ed il preventivo contattare l'ufficio tecnico: sales@pratic.it

Per un calcolo sommario dei prezzi riferiti a strutture fuori standard consultare documento dedicato su [B2B](#) /

For the real feasibility of the structure and the quotation please contact the technical office: sales@pratic.it

For a summary calculation of the prices referred to non-standard structures, please refer to dedicated document on [B2B](#)

 **Strutture soggette a sottoscrizione liberatoria /**
Structures subject to signature of disclaimer

A

Autoportante maxi: struttura con due moduli accoppiati senza due montanti centrali
max 600×400 cm

Maxi self standing: structure with paired modules without central sections
max 600×400 cm

B

Strutture con croce intermedia: struttura con moduli accoppiati sia sul lato della profondità P sia sul lato della larghezza L

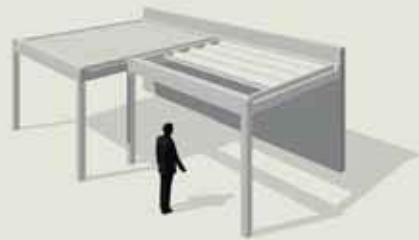

Structures with central crossbeam: structures with modules paired along both the depth side P and the width side L

C1

Strutture affiancate lato L con profondità diverse: struttura autoportante realizzata accoppiando due moduli con profondità diverse

Structures joined along width side with different depths: free-standing structures pairing two modules with different depths

C2

Strutture affiancate lato L con profondità diverse: struttura con fissaggio a parete realizzata accoppiando due moduli con profondità diverse

Structures joined along width side with different depths: wall-mounted structures pairing two modules with different depths

C3

D1

Strutture affiancate lato P con larghezze diverse: struttura autoportante realizzata accoppiando due moduli con larghezze diverse

Structures joined along depth side P with different widths: free-standing structures pairing two modules with different widths

D2

Strutture affiancate lato P con larghezze diverse: struttura con fissaggio a parete realizzata accoppiando due moduli con larghezze diverse

Structures joined along depth side P with different widths: wall-mounted structures pairing two modules with different widths

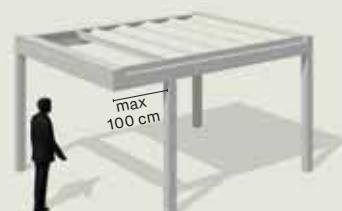

D3

E

Senza montanti: struttura senza montanti da installare su strutture esistenti. Solo per strutture Rialto.

Without uprights: structure without uprights installed on existing structures. Only for Rialto structures.

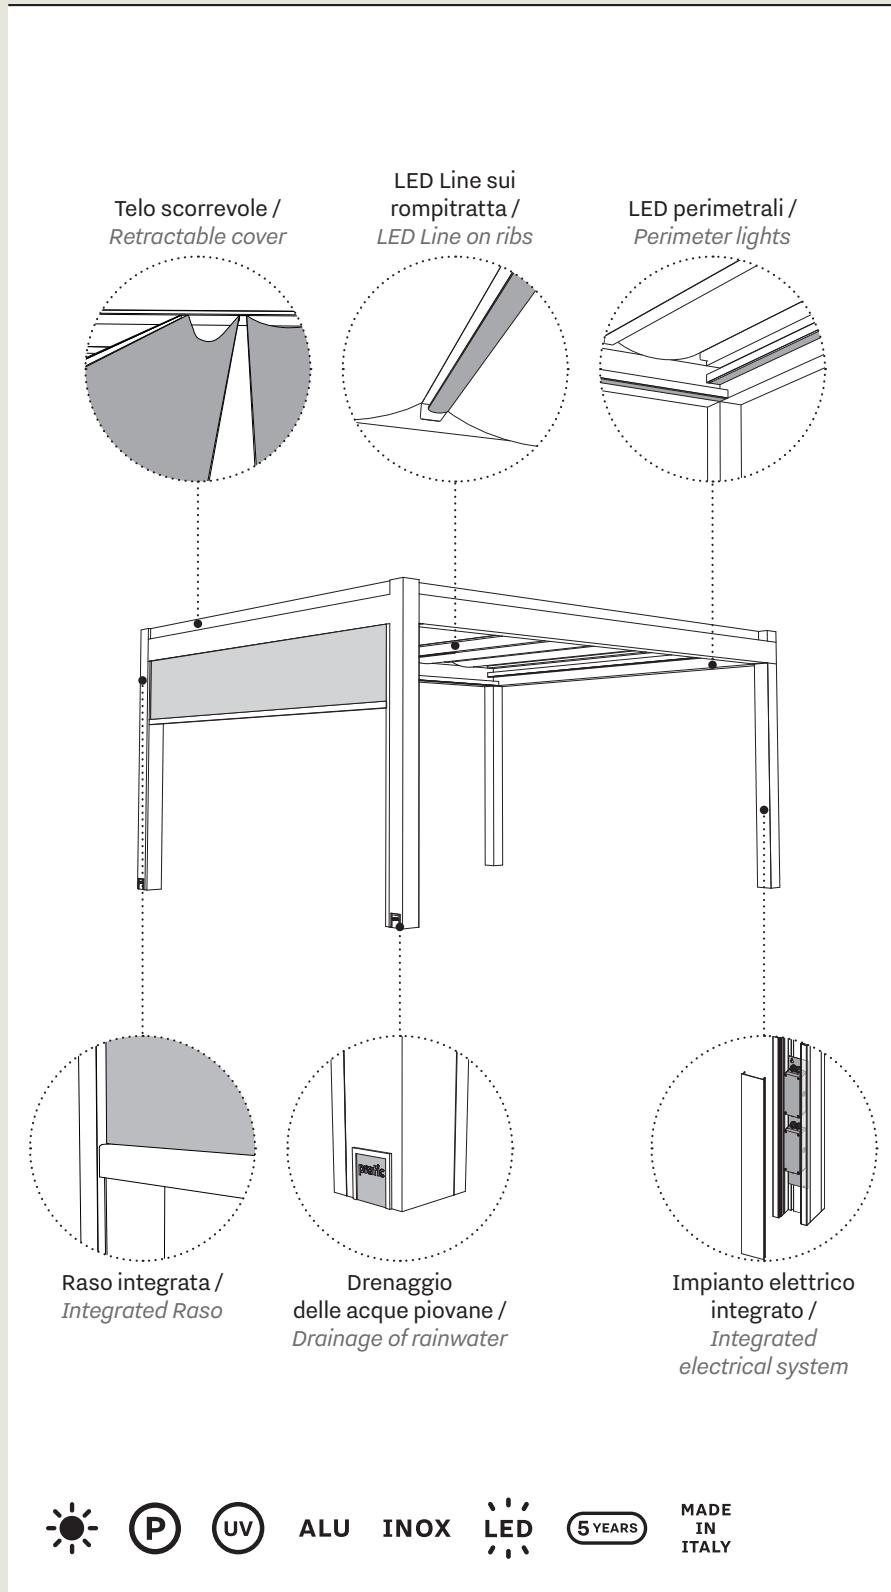

G

Le parti in plastica non sono verniciabili e sono disponibili esclusivamente nelle colorazioni indicate.

Plastic parts can't be lacquered and are available only in the colours above mentioned.

- Colorazione non disponibile per le plastiche dei profili tela / Colours not available for the fabric profiles plastic elements

La riproduzione dei colori è indicativa /
The reproduction of colours is approximate

Caratteristiche tecniche / Technical specifications

- Pergola con telo teso scorrevole a con scarico su entrambi i lati
- Pergola predisposta per l'integrazione nella struttura delle Raso
- Pergola con sistema di drenaggio e convogliamento delle acque piovane
- Gronda con scarico integrato nei montanti
- Premontaggio di serie delle pergole e delle parti elettriche

DIMENSIONI

- Moduli accoppiabili
- Singolo modulo:
 - L max 550 cm
 - P max 700 cm
 - H max 300 cm

MOVIMENTAZIONE

- Motore

PRODOTTI COMPLEMENTARI

· Raso	p. 108
· Slide Glass	p. 116
· Slide	p. 122
· Sottotelo	p. 127
· LED Line	p. 130

OPTIONAL

· Configurazioni fuori standard	p. 76
· Staffe giunzioni perimetrali per installazione Slide o Slide Glass	p. 86
· Verniciatura	p. 87
· Staffe telescopiche	p. 89
· Predisposizione Raso	p. 113
· Automatismi	p. 141
· Campionario Pratic	p. 168

INDICAZIONI IMPORTANTI

- Alcune delle caratteristiche tecniche del prodotto sono tutelate da relativi brevetti

- *Pergola with sliding foldable cover and water discharge on both sides*
- *Pergola prepared for integration into the structure of the Raso awnings*
- *Pergola with water drainage and piping for rain water.*
- *Gutters with water drainage integrated into the posts*
- *Standard pre-assembly of the pergolas and the electrical parts*

DIMENSIONS

- *Coupled modules*
- *Single module:*
 - *L max 550 cm*
 - *P max 700 cm*
 - *H max 300 cm*

OPERATION

- *Motor*

STAFFA A TERRA / GROUND BRACKET (STANDARD)

Per agevolare l'installazione in piano è possibile richiedere il taglio dei montanti a misura /

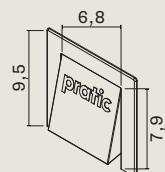

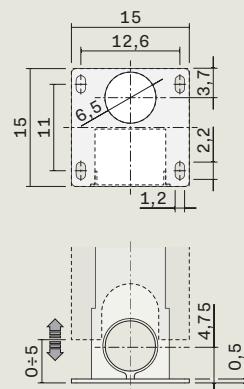

To facilitate the flat installation you may require custom cut of the posts

STAFFA TELESCOPICA / TELESCOPIC BRACKET (OPTIONAL)

Regolabile in altezza fino a 5 cm
Se ordinata assieme alla Raso saranno fornite le guide e i profili compensatori più lunghi di 5 cm, da adattare in fase di posa /

*Height-adjustable up to 5 cm
If ordered together with the Raso,
it will be provided with guides
and compensating profiles 5 cm longer,
to adjust during installation*

DEFLUSSO ACQUA / WATER DISCHARGE

N.B.

In fase d'ordine specificare su quali montanti predisporre lo scarico d'acqua. Su una configurazione a 1 modulo, devono essere previsti almeno 2 deflussi d'acqua. Attenzione: è necessario posizionare gli scarichi uno a destra e uno a sinistra rispetto alla vista frontale della struttura. Per ogni modulo aggiuntivo è necessario aggiungere almeno 1 ulteriore deflusso d'acqua.

Note

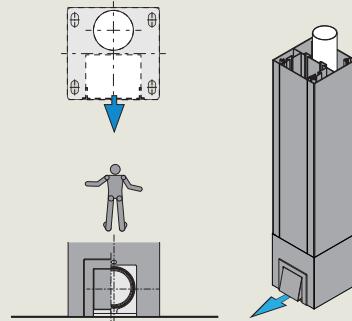

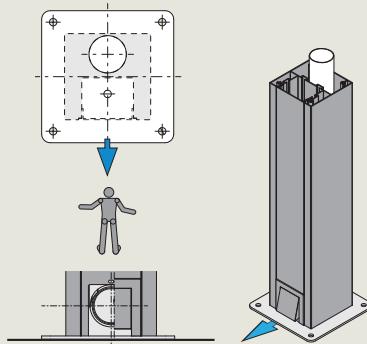

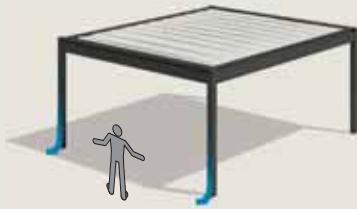

During the order phase, please specify on which posts you would like to prepare the water drainage. On a 1-module configuration, at least 2 water discharges must be provided. Warning: it is necessary to place one drainage on the right and the other on the left with respect to the front view of the structure. For each additional module it is necessary to add at least 1 additional water discharge.
